

# Box-Type Crusher

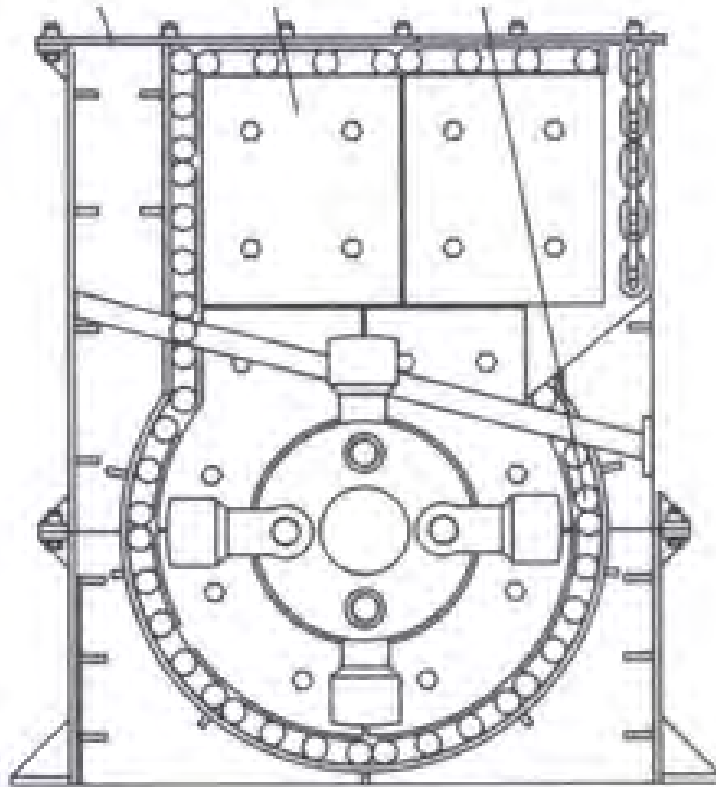

Operating Instruction

Henan Shibo Heavy Machinery Co., Ltd.

## Overview

The box crusher is the mechanical principle of crushing the stone by the general heavy hammer crusher, the counter hammer crusher, the vertical hammer crusher and the hammer head (board hammer). After the optimum design, the latest generation of broken machinery products have been produced.

The individual hammer head of the box type crusher has large weight, high rotor speed and big moment of inertia of the hammer. It fully embodies the advantages of large breaking and small weight, and has the unique ability to crush the super bulk stone.

## Technical data

Model	800×800	1000×1000	1000×1200	1200×1200	1400×1400	1600×1600	1800×1800
Roller diameter(mm)	800	1000	1000	1200	1400	1600	1800
Roller length(mm)	800	1000	1200	1200	1400	1600	1800
yield(t/h)	50-60	70-90	80-120	130-160	190-210	250-300	300-400
Feed grain size(mm)	≤500	≤800	≤1000	≤1100	≤1200	≤1400	≤1600
Stone	300MPa						
Power(kw)	55	75	90	110	132	160	210

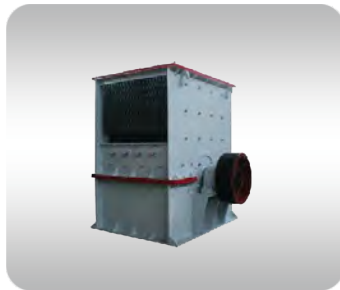

## Why choose us?

1. Being used in medium and fine crushing.
2. Can meet the requirement without a secondary crusher.
3. Big capacity, cheaper price, convenient usage.
4. Lower investment cost, small particle size, wide application, energy saving, bigger handling material.
5. Multi-finished powder, compact structure, reasonable layout, easy to install, better maintenance.
6. Large feeding port, small discharge particle size and reliable operation.
